

## PRESS KIT

Based in Washington, D.C., the private, not-for-profit Alliance for Aging Research dedicates itself to accelerating the pace of scientific discoveries and their application to vastly improve the universal human experience of aging and health. The nation's leading citizen advocacy organization, the Alliance works to raise the priority of medical and behavioral research into the aging process as a matter of national interest.

The Alliance for Aging Research believes science can help people live longer, more productive and satisfying lives. Greater access to the latest scientific information will empower people to take control of their own health, while spurring them to advocate for further medical advances. The Alliance believes that public policies and incentives to spur innovation in medicine and technology hold the greatest hope of meeting the challenge of the aging Baby Boom generation.

Through highly effective consumer awareness campaigns and headline-provoking reports, the Alliance helps to make aging-related science a visible and urgent national issue. Since its founding in 1986, the Alliance has seen federal support for research into aging more than quadruple, private sector R&D in aging-related health reach all-time highs, and new scientific and medical discoveries make a lasting difference for millions of Americans.
